(54) Fastener for lightning plate

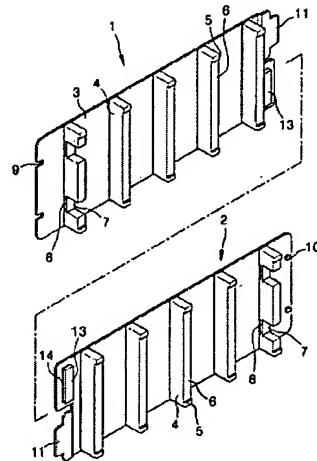

(57) Abstract

PURPOSE

A fastener for lightning plate placed on underground part of telegraph pole is provided for easy and efficient earth.

CONSTITUTION

A fastener for lightning plate comprises: a first fastener member(1) having slots(9) on one side, an inserting piece(11) and a holder(13) on the other side, and spacers(4) aligned at regular distance on the front side having curbs(5) and resting slots(6); and a second fastener member (2) having protrusions(10) on one side, a corresponding inserting piece(11) and a corresponding holder(13) on the other side, and spacers(4) aligned at regular distance on the front side having curbs(5) and resting slots(6). The spacers(4) closely located at the one end of both the first fastener member(1) and the second fastener member(2) have slots(7) and belt hole(8). A key piece(12) is on the back side of the inserting piece(11), and a inserting hole(14) and a key hole(15) are on the holder(13).
